

UPW-Shelf. Design Ulrich P. Wieser

Planning Aids

There are a number of clearly structured templates to help you with designing your personal shelf. We are also happy to assist you with planning.

Dimensions

With four shelf lengths (43, 52, 61 and 88 cm), three depths (22.5, 36 and 49.5 cm) and eight heights (from 54 to 261 cm), the system can adjust to the most diverse spaces and applications.

UPW-Shelf. Design Ulrich P. Wieser

UPW-Shelf. Design Ulrich P. Wieser

Functional, versatile and featuring a clear design language, Ulrich P. Wieser's 1961 bookshelf is a timeless and classic shelving system that offers lots of storage space for all sorts of things. With different heights, widths and depths, the system can adjust to both the most diverse spaces and requirements and, with a variety of different elements, the system can fulfil every need that can be met with a shelf, be it a bedside table or a bookshelf.

With its balanced proportions and its calm and unobtrusive expression, the system easily integrates into any interior

style, thus remaining a long-lasting companion. The special coreboard – a fine, sustainable and durable natural material – and the sophisticated construction result in beautiful surfaces with high load-bearing capacity.

Ready-made templates are available for planning, so that you have a clear overview of measurements and the elements needed. We are happy to assist you with planning and we guarantee a smooth process from production through to setting up the system in your home.

UPW-Shelf. Design Ulrich P. Wieser

Eight different heights, four different widths and three different depths

With such a range of options, we can create the perfect shelving system for you that solves your problems and matches your needs. We are also happy to set up the shelf for you.

Material

Special coreboard plywood. A material that unites the bending resistance of natural wood with the smooth surface of plywood, resulting in maximum stability and minimal weight. You can choose from either white or black open pore surface finishes. The wood texture remains visible in all finishes. All handles are fitted with screws and are made of sand-blasted, nickel-plated brass.

Construction

One crosspiece per shelving unit is sufficient for structural reinforcement. It can be fitted at any height. If you do not want any visible perforation, you can use side panels that are only perforated on their interior surface.

Additional Modules

Doors – both side-hung and drop-down – can be additionally fitted at any time or can be moved to a different part of the shelf without needing any milling or special tools. The doors feature magnetic fasteners; the drop-down doors are fitted with dampers. Slide-out drawers can accommodate everything that should not be visible but should still be within easy reach. The drawers are made from solid wood.
